

AccuFund Online

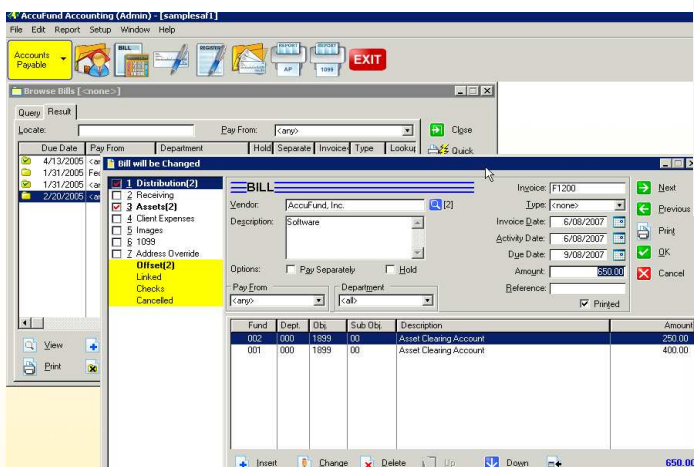

WHAT IT DOES FOR YOU

For municipalities, non-profits and government agencies without in-house technical expertise, the **AccuFund Accounting Suite** is available online as a "Software as a Service Solution." **AccuFund Online** is a service that provides you with all the functionality of the **AccuFund Accounting Suite*** without the need to purchase software or manage a Windows server. With **AccuFund Online**, all you need are local workstations running Windows and a high-speed Internet connection. Your agency's data is securely managed for you and regularly backed up.

HOW IT WORKS

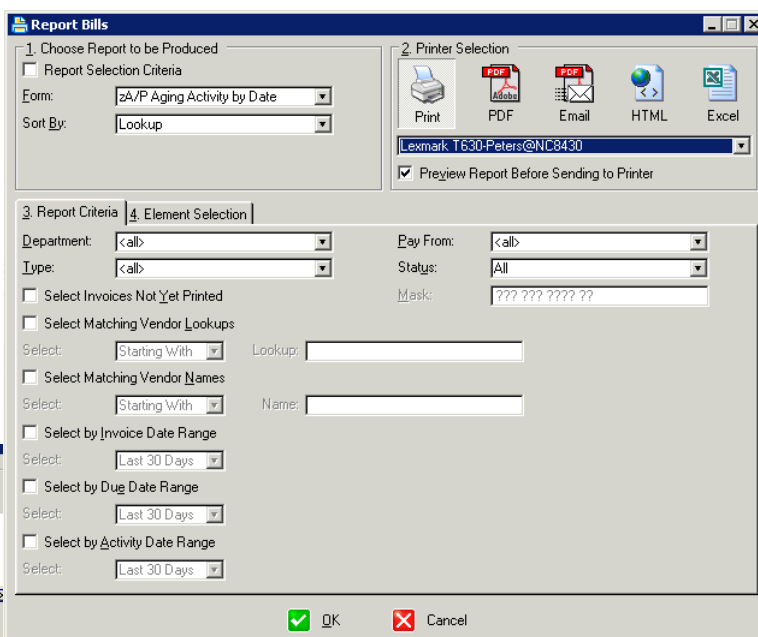

AccuFund Online offers all the modules contained in the **AccuFund Accounting Suite**. Each customer has their own database, yet AccuFund, Inc. handles all aspects of maintaining the accounting software. This includes

local reseller, who works with you to design and implement according to your environment. Once the software is set up, users have access and use it just as if it were installed on their workstation. Local printing is supported on defined laser printers.

AccuFund Online gives you the same "look and feel" as AccuFund residing on your local computer.

installing the software and all upgrades as they become available. AccuFund has contracted with hosting centers to provide the hardware environment and operating system. All you need to do is contract for the service from AccuFund. As a mid-tier accounting package, the software is set up to meet the organization's specific requirements. Like on-site software, setup and support is provided by a

When printing reports, all regular options are available within AccuFund, including printing to selected local printers.

OTHER FEATURES

Besides delivering the best solution for mid-tier non-profits and government agencies, **AccuFund Online** offers a number of additional features that will benefit your organization:

- ✓ **AccuFund Online** is secure. Access is through a client using a SSL (Secure Socket Layer) connection providing 256-bit encryption of data through the Internet.
- ✓ Double layered security. Each agency has a server logon and then each user logs into the agency database.
- ✓ Secondary hosting site is utilized for disaster recovery purposes.
